SCHOOL 212

MATHS CALCULATION POLICY

November 2017 Review Date: November 2020

Addition-

Key language which should be used: sum, total, parts and wholes, plus, add, altogether, more than, 'is equal to' 'is the same as'

Concrete	Pictorial	Abstract	
Combining two parts to make a whole (use other resources too e.g. eggs, shells, teddy bears etc)		4 + 3 = 7 (four is a part, 3 is a part and the whole is seven)	
Counting on using number lines by using cubes or Numicon	A bar model which encourages the children to count on 4 ?	The abstract number line: What is 2 more than 4? What is the sum of 4 and 4? What's the total of 4 and 2? 4 + 2	
Regrouping to make 10 by using ten frames and counters/cubes or using Numicon: 6 + 5	Children to draw the ten frame and counters/cubes	Children to develop an understanding of equality e.g. $6 + \square = 11$ and $6 + 5 = 5 + \square$ $6 + 5 = \square + 4$	

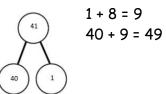

TO + O using base 10. Continue to develop understanding of partitioning and place value 41 + 8

Children to represent the concrete using a particular symbol e.g. lines for tens and dot/crosses for ones.

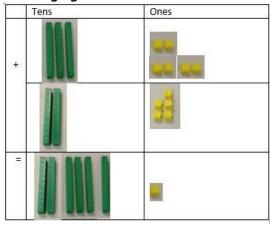

41 + 8

	4	1
+		8
	4	9

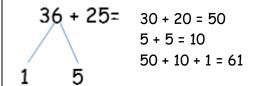

TO + TO using base 10. Continue to develop understanding of partitioning and place value and use this to support addition. Begin with no exchanging. 36 + 25

This could be done one of two ways:

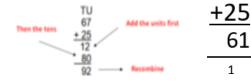

Looking for ways to make 10

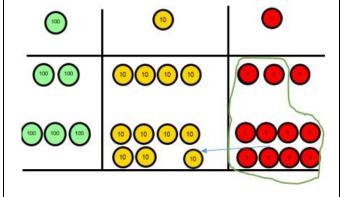

Expanded Method

Formal method:

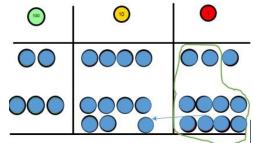

36

Use of place value counters to add HTO + TO, HTO + HTO etc. once the children have had practice with this, they should be able to apply it to larger numbers and the abstract

Children to represent the counters e.g. like the image below

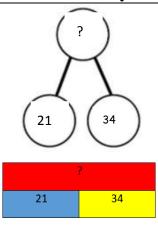

If the children are completing a word problem, draw a bar model to represent what it's asking them to do

	?
243	368

243

Decimal Addition

Fluency variation, different ways to ask children to solve 21+34:

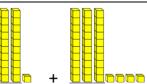

Sam saved £21 one week and £34 another. How much did he save in total?

21+34=55. Prove it! (reasoning but the children need to be fluent in representing this)

What's the sum of twenty one and thirty four?

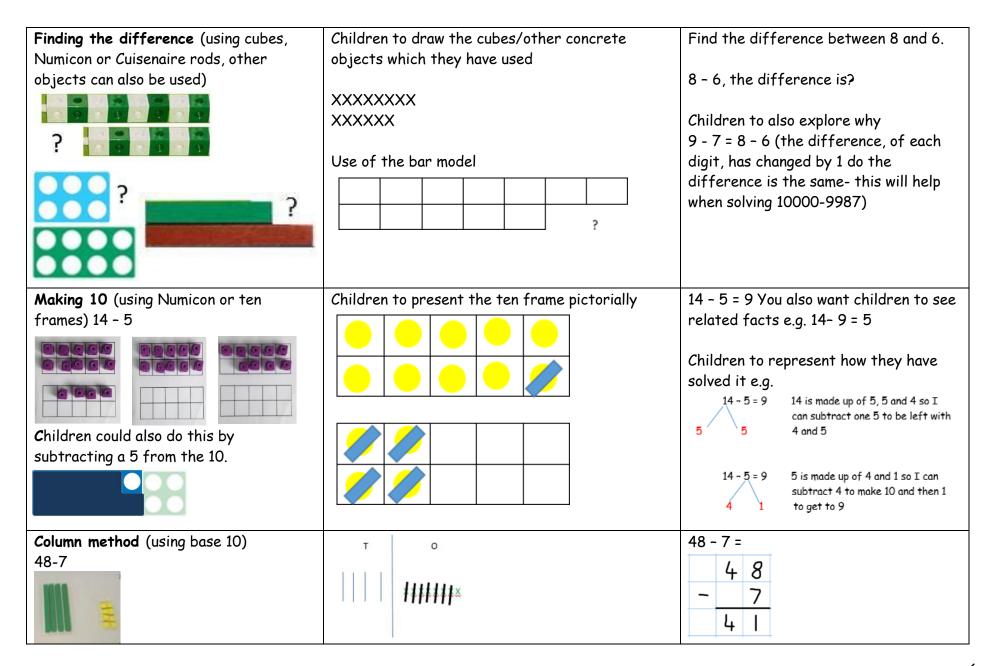

Always use missing digit problems too:

Tens	Ones
10 0	1
0 0 0	?
?	4

Subtraction-

Key language which should be used: take away, less than, the difference, subtract, minus, fewer, decrease, '7 take away 3, the difference is four'

Concrete	Pictorial	Abstract
Physically taking away and removing objects from a whole (use various objects too) rather than crossing outchildren will physically remove the objects 4-3=1	Children to draw the concrete resources they are using and cross out. Use of the bar model:	4-3 =
Counting back (using number lines or number tracks)	Children to represent what they see pictorially e.g. 6 X X X X X X X X X 2	0 1 2 3 4 5 6 7 8 9 10

Column method (using base 10 and having to exchange)

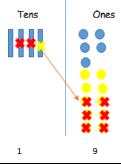

45-26

- 1) Start by partitioning 45
- Exchange one ten for ten more ones
- 3) Subtract the ones, then the tens.

Column method (using place value counters) 234-88

Represent the base 10 pictorially

Once the children have had practice with the concrete, they should be able to apply it to any subtraction.

Like the other pictorial representations, children to represent the counters.

It's crucial that the children understand that when they have exchanged the 10 they still have 45. 45 = 30 + 15

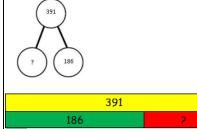

30 15 20 6

234

<u>- 88</u>

Fluency variation, different ways to ask children to solve 391-186:

Raj spent £391, Timmy spent £186. How much more did Raj spend?

I had 391 metres to run. After 186 I stopped. How many metres do I have left to run? 391 - 186

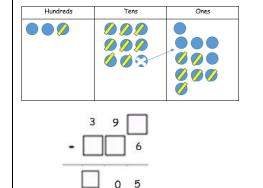

= 391 - 186

391

-186

Find the difference between 391 and 186
Subtract 186 from 391.
What is 186 less than 391?

What's the calculation? What's the answer?

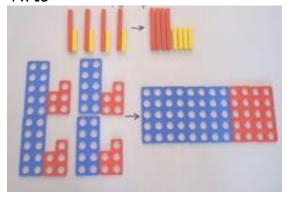

Multiplication-

Key language which should be used: double times, multiplied by, the product of, groups of, lots of, 'is equal to' 'is the same as'

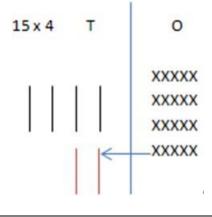

Concrete	Pictorial	Abstract
Repeated grouping/repeated addition (does not have to be restricted to cubes) 3 x 4 or 3 lots of 4	Children to represent the practical resources in a picture e.g. XX XX XX XX XX Use of a bar model for a more structured method	3 × 4 4 + 4 + 4
Use number lines to show repeated groups - 3 × 4	Represent this pictorially alongside a number line e.g: 0 4 8 12	Abstract number line 3 x 4 = 12
Use arrays to illustrate commutativity (counters and other objects can also be used) 2 x 5 = 5 x 2 Shatter Resistant	Children to draw the arrays	Children to be able to use an array to write a range of calculations e.g. $2 \times 5 = 10$ $5 \times 2 = 10$ $2 + 2 + 2 + 2 + 2 = 10$ $5 + 5 = 10$

Partition to multiply (use Numicon, base 10, Cuisenaire rods)

 4×15

Children to represent the concrete manipulatives in a picture e.g. base 10 can be represented like:

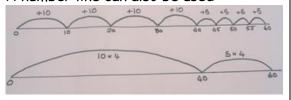

Children to be encouraged to show the steps they have taken

10 x 4 = 40

 $5 \times 4 = 20$ 40 + 20 = 60

A number line can also be used

Formal column method with place value counters or base 10 (at the first stageno exchanging) 3×23

Make 23, 3 times. See how many ones, then how many tens

100	10	1
	10 10	
	10 10	1 1 1
	10 10	1 1

Children to represent the counters in a pictorial way

Te	ens		Oı	nes	
	1		•	•	•
1	/		•	•	•
1	,		•	•	•
	6			9	

Children to record what it is they are doing to show understanding

 X
 20
 3

 3
 60
 9

× 3

Formal column method with place value counters (children need this stage, initially, to understand how the column method works)

Children to represent the counters/base 10, pictorially e.g. the image below.

6 x 23 6 x 3 = 18 6 x 20 = 120 120 + 18 = 138

Step 1: get 6 lots of 23

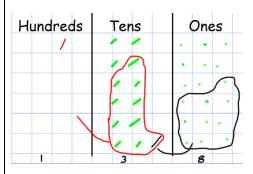

Step 2: 6 x 3 is 18. Can I make an exchange? Yes!
Ten ones for one ten....

Step 3: 6 x 2 tens and my extra ten is 13 tens. Can I make an exchange? Yes! Ten tens for one hundred...

Step 4- what do I have I each column?

The aim is to get to the formal method but the children need to understand how it works.

$$6 \times 23 =$$

23

$$\frac{\times 6}{138}$$

When children start to multiply $3d \times 3d$ and $4d \times 2d$ etc, they should be confident with the abstract:

To get 744 children have solved 6 \times 124 To get 2480 they have solved 20 \times 124

Answer: 3224

Fluency variation, different ways to ask children to solve 6×23 :

23 23 23 23 23

With the counters, prove that 6 \times 23 = 138

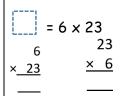

Why is $6 \times 23 = 32 \times 6$?

Mai had to swim 23 lengths, 6 times a week. How many lengths did she swim in one week?

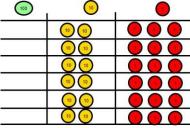

Tom saved 23p three days a week. How much did he save in 2 weeks?

Find the product of 6 and 23

6 x 23 =

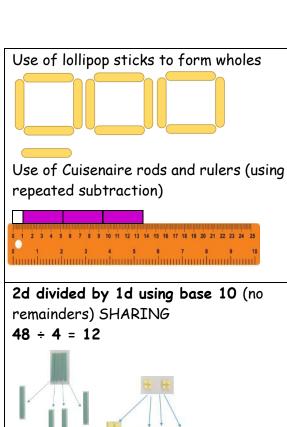

What's the calculation? What's the answer?

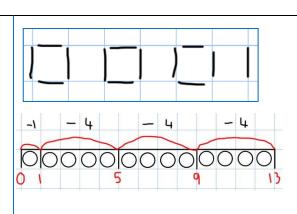

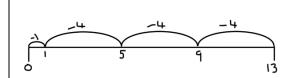

Division-

Key language which should be used: share, group, divide, divided by, half, 'is equal to' is the same as'

Concrete	Pictorial	Abstract	
6 shared between 2 (other concrete objects can also be used e.g. children and hoops, teddy bears, cakes and plates)	This can also be done in a bar so all 4 operations have a similar structure:	6 ÷ 2 = 3 What's the calculation? 3 3	
Understand division as repeated grouping and subtracting 6 ÷ 2	000000	Abstract number line -Z	
2d ÷ 1d with remainders 13 ÷ 4 - 3 remainder 1	Children to have chance to represent the resources they use in a pictorial way e.g. see below:	13 ÷ 4 - 3 remainder 1 Children to count their times tables facts in their heads	

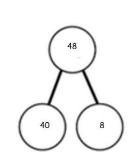

Children to represent the base 10 and sharing pictorially.

48 ÷ 4

42 ÷ 3

 $8 \text{ ones} \div 4 = 2 \text{ ones}$ 10 + 2 = 12

'Chunking'

 $4 \text{ tens} \div 4 = 1 \text{ ten}$

Start with the tens.

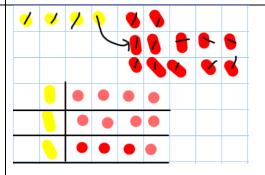

Sharing using place value counters. 42 ÷ 3= 14

1. Make 42. Share the 4 tens between 3. Can we make an exchange with the extra 10?

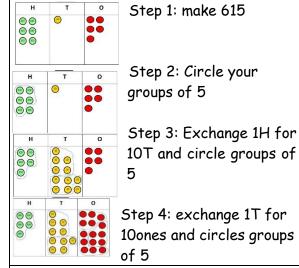

Exchange the ten for 10 ones and share out 12 ones

42 = 30 + 125 72 - 50 10X5 $30 \div 3 = 10$ 22 - 20 4×5 $12 \div 3 = 4$ The answer is 14 remainder 2 10 + 4 = 14

Use of the 'bus stop method' using grouping and counters. Key language for grouping- how many groups of X can we make with X hundreds'- this can also be done using sharing!

 $615 \div 5$

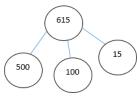

This can easily be represented pictorially, till the children no longer to do it.

It can also be done to decimal places if you have a remainder!

123 5 615

Fluency variation, different ways to ask children to solve 615 ÷ 5:

Using the part whole model below, how can you divide 615 by 5 without using the 'bus stop' method?

I have £615 and share it equally between 5 bank accounts. How much will be in each account?

615 pupils need to be put into 5 groups. How many will be in each group?

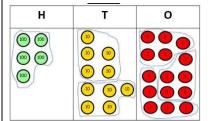

5 615

615 ÷ 5 =

= 615 ÷ 5

How many 5's go into 615?

What's the calculation? What's the answer?

Long division

Concrete	Pictorial	Abstract
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	Children to represent the counters, pictorially and record the subtractions beneath.	Step one- exchange 2 thousand for 20 hundreds so we now have 25 hundreds. 12 2544 Step two- How many groups of 12 can I make with 25 hundreds? The 24 shows the hundreds we have grouped. The one is
How many groups of 12 are in 25 hundreds? 2 groups. Circle them. We have grouped 24 hundreds so can take them off and we are left with one. Exchange the one hundred for ten tens so now we have 14 tens. How many groups of 12 are in 14? 1 remainder 2. Exchange the two tens for twenty ones so now we have 24 ones. How many groups		how many hundreds we have left. Exchange the one hundred for 10 tens. How many groups of 12 can I make with 14 tens? The 14 shows how many tens I have, the 12 is how many I grouped and the 2 is how many tens I have left.
of 12 are in 24? 2		Exchange the 2 tens for 20 ones. The 24 is how many ones I have

	grouped and the 0 is what I have left.
